

● SYSTEM ONLINE

Converza

The AI Operating System for
Business Growth.

Converza replaces expensive marketing agencies and sales teams with an AI system that **generates leads, answers messages 24/7, and actually closes deals.**

Leaking revenue through *outdated workflows.*

ERR: ASLEEP_AT_WHEEL

Human Latency

Mid-market businesses lose millions because human reps sleep. If a customer messages on Instagram at 2 AM, they buy from a competitor by 9 AM.

ERR: THE_COST_TRAP

Siloed Marketing

Companies waste \$5,000+ a month on agencies that run ads but have zero connection to the actual sales team converting the leads.

ERR: LOST_KNOWLEDGE

Buried Data

A company's best sales arguments and product details are buried in old Telegram chats and Google Docs, useless to new hires.

A "Second Brain" that runs your *sales and marketing.*

The Brain

We ingest all of a company's raw data—FAQs, past sales transcripts, brand rules—into a highly secure vector database.

The Hands

We deploy AI workers connected directly to the brain. They instantly answer inbound messages, handle customer objections perfectly, and book meetings.

The Engine

It doesn't just wait for messages. The system actively creates marketing content, posts it, and drives traffic, running the entire customer journey.

Why Now?

AI is finally fast and cheap enough to do real work.

TECHNOLOGICAL SHIFT

The End of "Chatbots"

Basic chatbots just talk and get easily confused.

The technology now exists to build autonomous AI agents that actually execute specific, multi-step business workflows reliably.

ECONOMIC SHIFT

Cost Collapse

A year ago, running an AI system 24/7 to handle an entire company's marketing would cost thousands in server fees. Today, new models allow us to do it for fractions of a cent, creating massive profit margins.

Replacing the **\$500B** outsourced services market.

\$500 B+

Global Outsourced Services (TAM)

The total global spend on B2B outsourced sales, marketing agencies, and lead generation services.

Target Audience (SAM)

Mid-market businesses (\$5M-\$50M revenue) that rely heavily on social media and chat to sell high-ticket services (e.g., clinics, real estate, premium e-commerce).

The Wedge (SOM)

We are starting in emerging markets (CIS/MENA) where the pain of lost leads is highest and sales cycles are fast, before scaling the proven model to the US.

Why we win against *chatbots and agencies.*

Basic AI Tools

They hallucinate and make up facts because they don't have a secure "Second Brain" anchored to the company's real, proprietary data.

Traditional Agencies

Slow, highly expensive, only work 9-to-5, and require constant human management to align with current sales objectives.

The Converza Moat

Our AI is disciplined. Instead of one confused bot trying to do everything, we use specialized AI workers. One only writes copy, one only answers DMs, one only analyzes data. This ensures enterprise-grade reliability.

How Converza works in the *real world.*

- 1 The Learner:** The system studies the company's history and creates a perfect profile of how they sell.
- 2 The Closer:** It plugs into their social media and intercepts every message instantly, converting questions into calendar bookings or payments.
- 3 The Creator:** It generates social media posts and ads designed to drive more traffic to the Closer.
- 4 The Optimizer:** Every night, the AI reviews what sold and what didn't, permanently improving the strategy for the next day.

The "Land and Expand" Strategy.

PHASE 2

The Data Capture

By running their messages, we learn exactly how their customers think, object, and buy.

PHASE 1

The Wedge (\$500/mo)

We sell a simple "DM Closer" that stops them from losing late-night leads. We prove we can make them money in week one.

PHASE 3

The Full OS (\$1,500/mo)

Once we have their trust, we turn on the full marketing engine, replacing their expensive agencies entirely.

Global Arbitrage.

Elite Execution.

Nuriddin, CEO

A 20-year-old growth operator and Top 30 National Finisher in the Republic Olympiad of Informatics. Dropped out of a full-ride university scholarship to direct high-scale media strategy for global brands including Nike and FIFA. An UzCombinator accelerator alumnus (top 2% selection), commands Converza's Go-To-Market pipeline, relentlessly driving enterprise client acquisition and zero-click revenue scaling.

Patrick, CTO

A 19-year-old technical anomaly. Self-taught in machine learning and computer vision. Previously led a 30+ engineer team to build a CV prototype (Forest Guard) and solo-built an AI ed-tech platform (Evrika) to 5,000+ users with zero funding. He is the architect behind Converza's secure vector database integrations and the specialized AI routing system.

Pre-Seed *Round.*

\$80,000

AT \$800K POST-MONEY CAP

The Capital Stack

Total Allocation:
\$80,000

Committed (Pending):
\$40,000 (Yoshlar Ventures)

Remaining Allocation:
\$40,000

Use of Funds & Advantage

0% Western Overhead: Hacker House in Tashkent. Rent/living costs are effectively zero.

90% Compute & Dist: Capital flows directly to API costs and B2B sales pipelines.

Lean Scaling: Founders only for Mo 1-4.
One strategic growth hire in Mo 5.

The Output (10-Month Runway)

Target Milestone:
\$15,000 MRR by April 2027.

Unit Economics:
80% Gross Margins.

End State:
Reaching "Default Alive" profitability before runway expires.
